

WebFones Conference Bridge

WebFones PBX provides a conference bridge for teleconferencing. Among the features that it offers are:

- Caller count announcement when joining a conference
- Volume control for both the conference and the participant
- Conference mute/unmute

Volume Menu

The volume menu can be activated while a conference is in progress by pressing the * key. The participant can then choose one of the following options from the volume menu:

- 1 - mute/unmute
- 4 - Decrease volume of conference with each 4 you press - end with 8
- 6 - Increase volume of conference with each 6 you press - end with 8
- 7 - Decrease your volume - end with 8
- 9 - Increase your volume - end with 8
- 8 - exit

Notes about Music on Hold

While the music on hold feature is automatically disabled for local extensions participating in a conference, it is still possible for an external caller to disrupt a conference by placing the conference on hold without first muting the conference.

Participants can mute themselves by pressing “*1”. This will keep music on hold from playing.

Exiting a conference

You can exit a conference either by pressing “#” or by hanging up. We offer “#” as an option to make it easier to hang up on the conference in order to answer an incoming call.
